```

Practices 8

The screenshot shows a Tilix terminal window with two panes. The title bar reads 'Tilix: japariona@cis106: ~'. The left pane displays the help text for the 'uname' command, and the right pane shows a list of commands being executed in a terminal session.

```

1: japariona@cis106: ~
uname(1)      User Commands  uname(1)

NAME
    uname - print system information

SYNOPSIS
    uname [OPTION]...

DESCRIPTION
    Print certain system information.  With no OPTION, same as -s.

    -a, --all
        print all information, in the following order, except omit -p and -i if unknown:

    -s, --kernel-name
        print the kernel name

    -n, --nodename
        print the network node hostname

    -r, --kernel-release
        print the kernel release

    -v, --kernel-version
        print the kernel version

    -m, --machine

ame(1) line 1 (press h for help or q to quit)

2: japariona@cis106: ~

Practices 9

```
japariona@cis106: ~  
0 to use the locale's alternate numeric symbols if available.  
  
Examples:  
Convert seconds since the Epoch (1970-01-01 UTC) to a date  
$ date --date='@2147483647'  
  
Show the time on the west coast of the US (use tzselect(1) to find TZ)  
$ TZ='America/Los_Angeles' date  
  
Show the local time for 9AM next Friday on the west coast of the US  
$ date --date='TZ="America/Los_Angeles" 09:00 next Fri'  
  
GNU coreutils online help: <https://www.gnu.org/software/coreutils/>  
Full documentation <https://www.gnu.org/software/coreutils/date>  
or available locally via: info '(coreutils) date invocation'  
japariona@cis106:~$ whatis ls  
ls (1) - list directory contents  
japariona@cis106:~$ whatis pwd  
pwd (1) - print name of current/working directory  
japariona@cis106:~$ whatis apt  
apt (8) - command-line interface  
japariona@cis106:~$ whatis sudo  
sudo (8) - execute a command as another user  
japariona@cis106:~$
```

Practices 10

```
japariona@cis106: ~  
# To print the date in a format suitable for affixing to file names:  
date +"%Y%m%d_%H%M%S"  
  
# To convert a Unix timestamp to Date (Linux):  
date -d @1440359821  
  
# To convert a Unix timestamp to Date (OSX):  
date -r 1440359821  
  
# To show the current timezone:  
date +%Z  
  
# To show date in RFC format with TZ offset:  
date -R  
  
# To show date in UTC/GMT:  
date -u  
  
# To show date in CET:  
TZ=CET date  
  
# To show the time on the west coast of the US (use tzselect(1) to find TZ):  
TZ='America/Los_Angeles' date  
japariona@cis106:~$
```
